

Shayaan Rashedin

Mississauga, ON | 647-877-1449 | shayaan.rashedin@torontomu.ca

linkedin.com/in/shayaanrashedin | github.com/shayaanrashedin | Portfolio: shayaanrashedin.github.io

Skills

Technical Skills: Security operations, SIEM monitoring, log analysis, alert triage, vulnerability assessment, remediation reporting, incident response fundamentals, threat detection, MITRE ATT&CK mapping, networking fundamentals, Linux and Windows systems, security tooling, Git/GitHub, technical documentation, Python, C/C++, Java, Bash, PowerShell, SQL.

Soft Skills: Technical communication, analytical problem solving, troubleshooting, leadership, workshop facilitation, teamwork, adaptability, attention to detail.

Education

Bachelor of Engineering - Computer Engineering

September, 2023 - Exp. April, 2028

Toronto Metropolitan University, Toronto, ON

- Relevant Coursework: Operating Systems, Computer Organization & Architecture, Software Systems, Engineering Algorithms & Data Structures, Advanced Algorithms, Digital Systems, Communication Systems.

Certifications/Training

Google Cybersecurity Professional Certificate

June, 2025

- Hands-on training in threat analysis, vulnerability management, SIEM-based detection, Linux security, and incident response aligned with NIST and MITRE ATT&CK frameworks.

Google IT Support Professional Certificate

February, 2025

- Practical experience with Linux and Windows system administration, TCP/IP networking (DNS, DHCP, NAT), troubleshooting, and foundational IT security concepts.

Cyberstart Canada – National Cybersecurity Program

October, 2025 – June, 2026

- Challenge-based cybersecurity training covering reconnaissance, exploitation fundamentals, cryptography, and defensive security concepts.

Projects

Cybersecurity Home Lab | VirtualBox, Kali Linux, Metasploitable2, Ubuntu, Splunk | *Portfolio write-ups available*

- Built an isolated multi-VM lab to practice end-to-end security workflows, including Nmap reconnaissance, OpenVAS vulnerability assessment, controlled exploitation, and remediation documentation.
- Validated vulnerable services including vsftpd, UnrealIRCd, distcc, Telnet, and MySQL, documenting evidence, MITRE ATT&CK mapping, risk impact, and hardening guidance.
- Built a Splunk detection workflow by ingesting syslog data, simulating FTP brute-force activity, writing SPL correlation logic, and producing actionable alerting notes.

Network Threat Detector | Python, Wireshark CSV logs, rule-based detection | *GitHub project*

- Developed a Python tool that analyzes exported Wireshark traffic logs to flag suspicious activity, including repeated failed connections, unusual port activity, and potential scanning behavior.
- Added severity classification logic to categorize alerts by risk level, improving the project's ability to prioritize suspicious network events.
- Structured the project with sample data, SQLite alert storage, documented detection logic, Docker-based setup, and an Airflow DAG to demonstrate coding, networking, and basic data pipeline skills.

Experience

VP of Education - TorontoMet Cybersecurity Association, Toronto, ON

Oct 2025 - Present

- Plan and lead educational cybersecurity workshops and CTF sprint sessions for TMU students, helping participants build skills in Linux administration, networking, and core security concepts.
- Develop instructional materials, coordinate event logistics, and support students during hands-on labs by guiding troubleshooting, reinforcing key ideas, and ensuring an inclusive learning environment.

Youth Engineering Instructor - Toronto High Park Young Engineers, Toronto, ON

Sept 2024 - Present

- Teach LEGO-based engineering lessons to 20+ students, simplifying concepts like transmissions, gear ratios, and basic programming logic into engaging, age-appropriate activities.
- Create a positive classroom environment by encouraging teamwork and problem-solving, while guiding students through structured builds and interactive engineering challenges.
