TECHNICAL SKILLS

Python, Java, C/C++, SQL, Bash, PowerShell, algorithms and data structures, SQLite, Git, Networking, Wireshark, log analysis, Splunk, threat detection, vulnerability assessment, Linux, Windows, Microsoft Office Suite.

EDUCATION

Bachelor of Engineering - Computer Engineering

Sep 2023 - Apr 2028

Toronto Metropolitan University, Toronto, ON

- Relevant coursework: Software Systems, Algorithms & Data Structures, Operating Systems, Computer Architecture, Digital Systems, Communication Systems.

PROJECTS

Network Threat Detector | Python, SQLite, Wireshark CSV, Docker, Airflow | GitHub

- Built a Python detection tool that parses Wireshark-exported CSV logs and applies rule-based logic across 4 alert categories: port scanning, suspicious outbound connections, data exfiltration, and beaconing behavior.
- Added severity scoring and SQLite persistence, storing 7 alert fields with structured JSON details to support repeatable triage and project demos.
- Organized the codebase with sample logs, documented thresholds, database initialization, Docker-based setup, and an Airflow DAG to demonstrate software engineering, networking, and basic pipeline skills.

Cybersecurity Home Lab | Kali Linux, Metasploitable2, Ubuntu, Splunk | Portfolio

- Built a 3-VM security lab to practice the full workflow from reconnaissance to documentation, including Nmap scanning, OpenVAS assessment, controlled validation, and remediation notes.
- Validated and documented 5+ vulnerable services, including vsftpd, UnrealIRCd, distcc, Telnet, and MySQL, with risk impact, MITRE ATT&CK mapping, and hardening guidance.
- Created a Splunk brute-force detection workflow by ingesting syslog data, simulating FTP login activity, writing SPL correlation logic, and producing actionable alert notes.

EXPERIENCE

Cybersecurity VP of Education – TorontoMet Cybersecurity Association, Toronto, ON

Oct 2025 - Present

- Plan and lead student-facing cybersecurity workshops and CTF sprint sessions covering 3 core areas: Linux fundamentals, networking concepts, and practical security workflows.
- Create instructional material, coordinate lab logistics, and support hands-on troubleshooting so students can complete guided exercises in a clear and inclusive environment.
- Translate technical concepts into beginner-friendly explanations, strengthening communication skills needed for software, IT, and security-focused teams.

CERTIFICATIONS & TRAINING

Google Cybersecurity Professional Certificate

Jun 2025

- Completed hands-on training in threat analysis, vulnerability management, SIEM-based detection, Linux security, and incident response aligned with NIST and MITRE ATT&CK concepts.

Google IT Support Professional Certificate

Feb 2025

- Completed practical training in Linux/Windows system administration, TCP/IP networking, DNS, DHCP, NAT, troubleshooting, and foundational IT security.

CyberStart Canada - National Cybersecurity Program

Oct 2025 - Jun 2026

- Completed challenge-based training across reconnaissance, exploitation fundamentals, cryptography, and defensive security concepts.
